RPW
Logistics

Award-winning Mantis WMS Logistics Vision Suite (LVS) enables RPW Logistics, a major 3PL and packaging management solutions provider for the automotive spare parts industry in Romania, to gain top productivity to the benefit of its multinational depositors / clients.

RPW Logistics is a key player in the Romanian 3PL market with valuable expertise in the automotive spare parts sector. From its warehouse premises of 21,000 sq.m. in the county of Timis, the company daily delivers to many European companies of automotive components, spare parts, and equipment.

Driven by its depositors / clients need for more inventory visibility, RPW Logistics left behind the “pen and paper” way of operating and automated its workflows, investing in a state-of-the art WMS / logistics software to address the new challenges of the demanding market.

After extensive research for a highly effective Warehouse Management System (WMS) with a proven track record in the sector, RPW Logistics decided to opt for Mantis LVS, the leading international WMS / logistics software, and cooperate with Mantis’ valued partner in Romania, Senior Software and its team of experts.

The award-winning Mantis WMS LVS streamlined all inbound and outbound logistics operations and optimized the order execution process, a highly complex procedure because of the great diversity of SKUs and packaging needs.

The competitive advantages of Mantis WMS LVS -true adaptability, unbeatable flexibility and unique upgradeability- led to great results for RPW Logistics and more precisely to:

- △ Inventory visibility
- △ Optimization of warehouse operations
- △ Improvement of operational efficiency
- △ Optimization of storage space
- △ Order accuracy
- △ Improvement of labor force management
- △ Productivity increase
- △ Increase of customer satisfaction level

RPW Logistics

“We wanted a WMS software that would consolidate all the transactions and operations in the warehouse. Due to the LVS implementation, we have a much more structured way of doing our job, people work much more organized and have managed to improve their operational skills.”

Marcel Crepcia, Operations Manager, RPW Logistics

About RPW Logistics

Established in 2012, RPW Logistics serves as logistics and packaging solutions provider for international brands of automotive components, spare parts and equipment, both in Romania and other European countries. The activities covered by the company include reception and sorting of packaging, washing of packaging with special equipment, palletizing and storage, wrapping of packaging, cross docking and deliveries.
